

## IN THE CLAIMS

Please cancel Claims 2-17 without prejudice or disclaimer of subject matter.

1. (Original) A bezel for facilitating the connection between an external device positioned on one side of a communication panel and a module located on the other side of said panel, said panel having an opening for receiving said bezel, said bezel comprising:

a housing, said housing defining an interior portion;

a first open end for insertion into said opening and said module, wherein said first end receives a first communication connection from said module for connection with said external device; and

a second open end having a removable cover, wherein said second end receives a second communication connection from said external device for connection with said first communication connection.

2. - 17. (Cancelled)
